RELEVANT EXPERIENCE

Software Engineer Intern | Microsoft 365 Project

Feb 2024 - Apr 2024

Developing a full-stack single-page application for managing Microsoft 365 tenants.

TypeScript | Angular

- Cost analysis of Microsoft 365 SKUs/Subscriptions
- Interactive dashboard for managing tenants

TECHNICAL SKILLS

Programming Languages | Java, TypeScript, Elixir, C++, C#, Python

Libraries & Frameworks | Next.js with React, Angular, Tailwind, Phoenix, Spring Boot, React Native

Databases | PostgreSQL, MySQL, MongoDB

Testing & Deployment | Selenium, Cucumber, JUnit

Developer Tools & Methodologies | Docker, Git & GitHub Actions, NPM, Agile Methodology, TDD/BDD, CI/CD

PROFILE

I'm a software engineer who builds distributed systems and data-driven architectures that scale. Currently completing my Master's in Computer Science.

What I bring:

- Full-stack development across multiple stacks (Java, TypeScript, Python, C++)
- Experience designing and deploying microservices, distributed systems, and cloud infrastructure (Spring Boot, Docker, Azure Functions, Cloudflare)
- Strong foundation in system architecture, real-time data processing, and automation

What drives me:

I thrive in environments where technical challenges meet architectural decisions. Whether designing resilient distributed systems, optimizing data pipelines, or building scalable solutions – I'm drawn to problems that require both hands-on implementation and strategic thinking.

Master's Student, graduating 2027 | Open to internships, projects, and connecting with fellow engineers building the future of distributed systems

EDUCATION

Hasselt University | Master of Science in Computer Science

Expected 2027

- Completed Year 1.

UCLL University College | PBA Applied Computer Science (Software)

Sep 2021 — Aug 2024

- Learning to collaborate in a team and manage a project.
- Strong communication skills in team settings.
